

Geometry!

What will we learn?

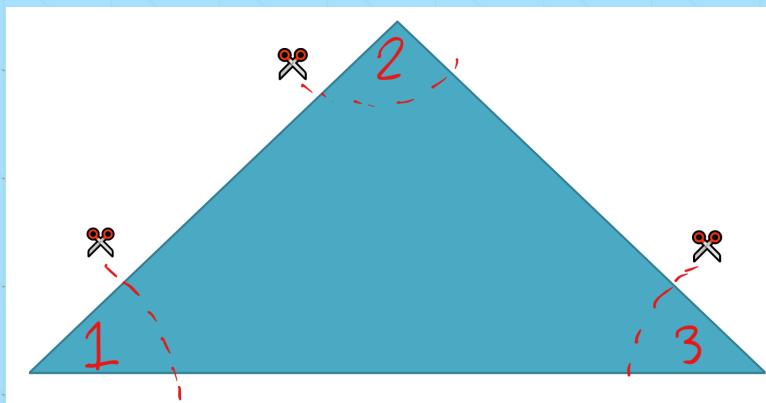

- Apply the angle sum of a triangle

Investigate the relationship of an exterior angle of a triangle with the two interior opposite angles

Angle Sum of Triangles: Activity

- You all have a triangle
- Label the angles 1, 2, and 3
- Cut them out like this

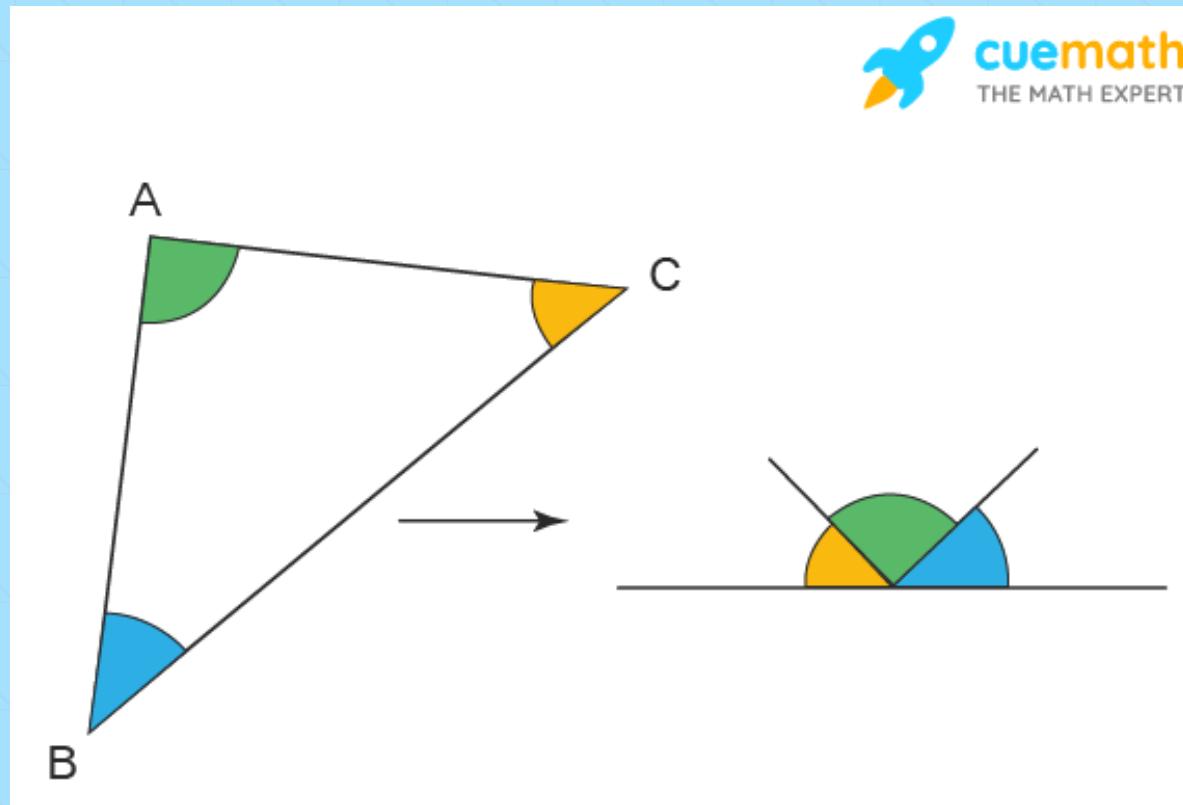

- Now put the corners together
- What do you get? 

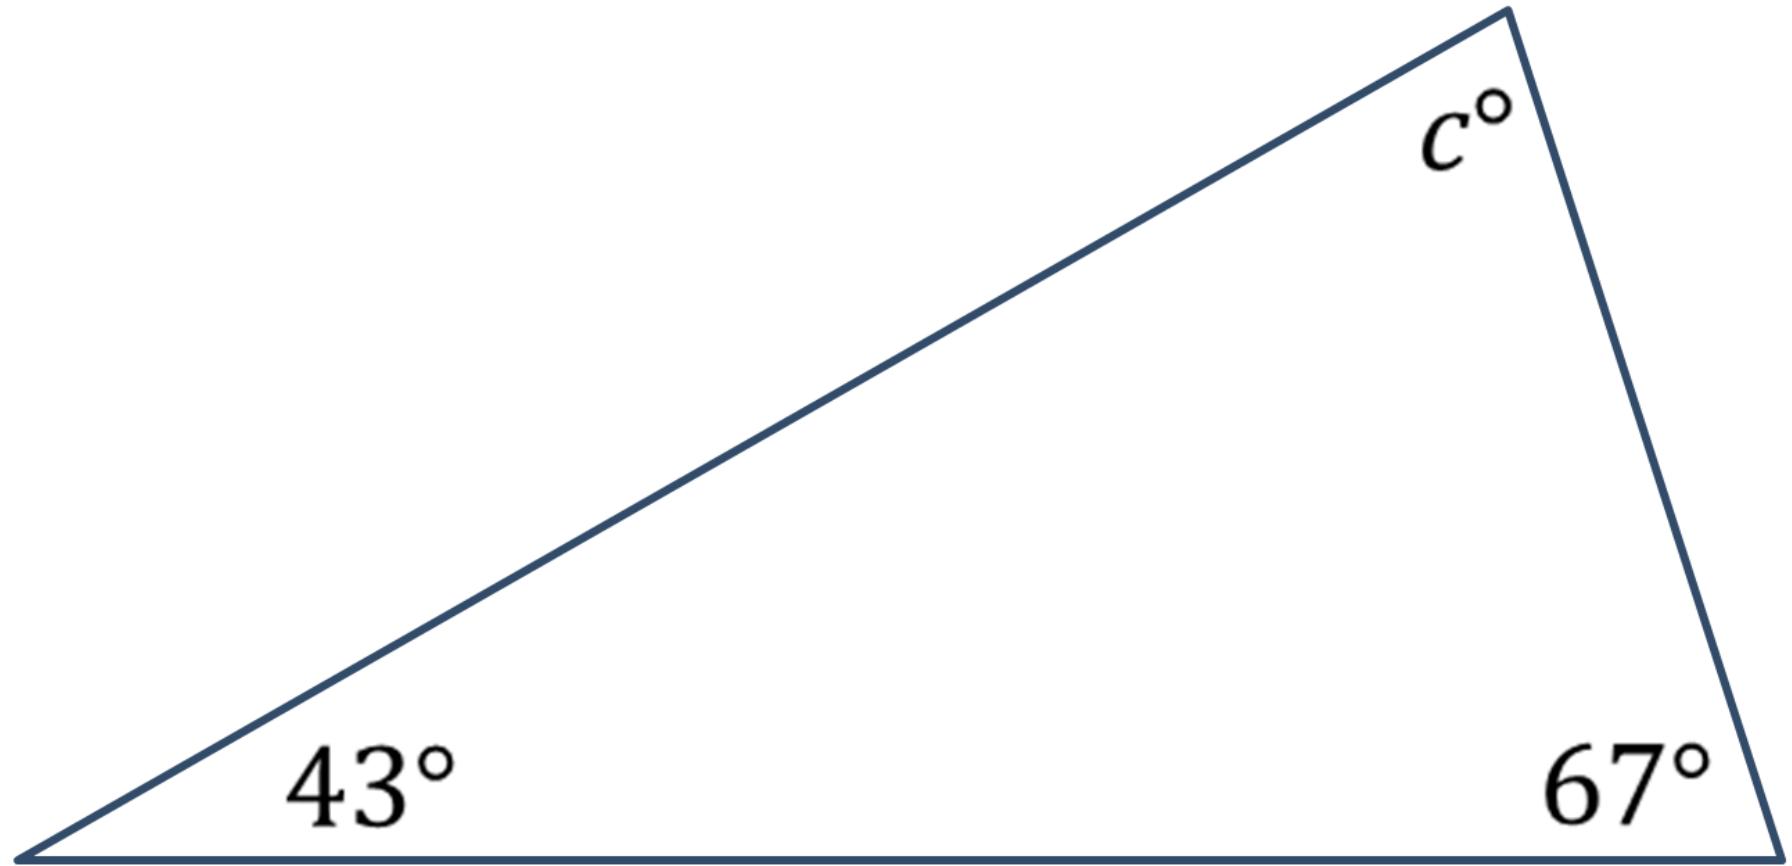

That's right, they all make a straight line

The Angle Sum of a Triangle

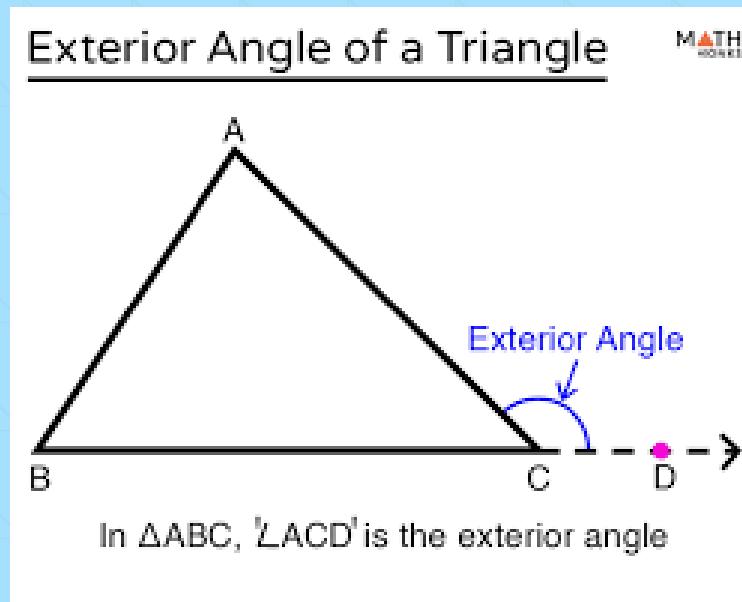

is 180° !

Example

Exterior Angle of Triangles

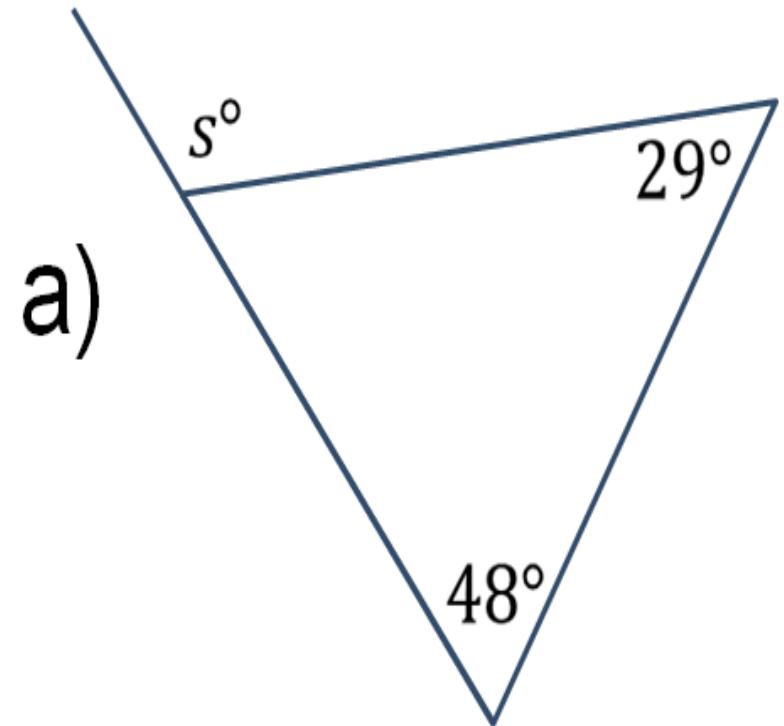

Visualize

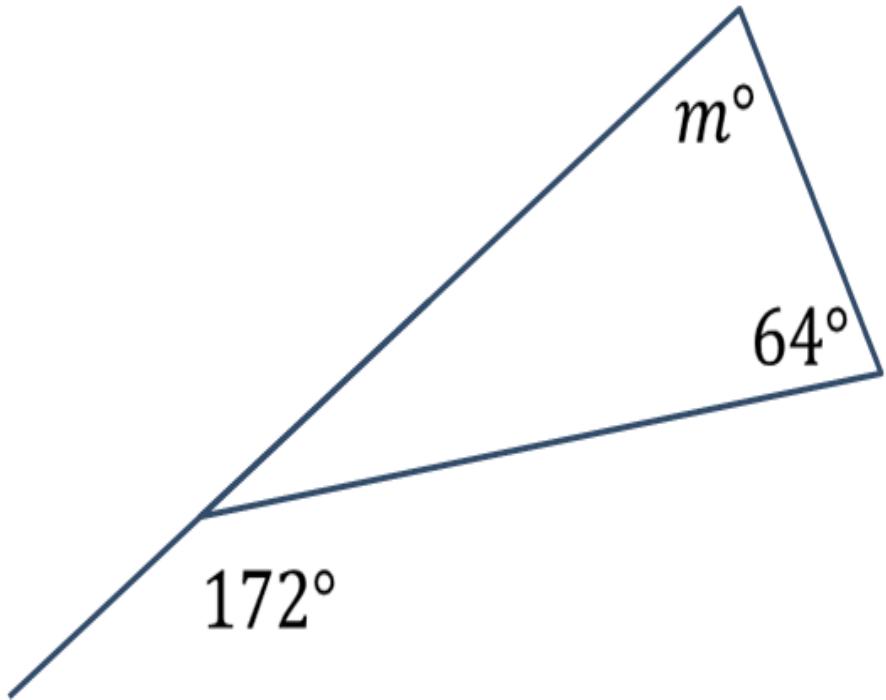

- How does this relate to the angle sum?

Examples

Find the value of each pronumeral

b)

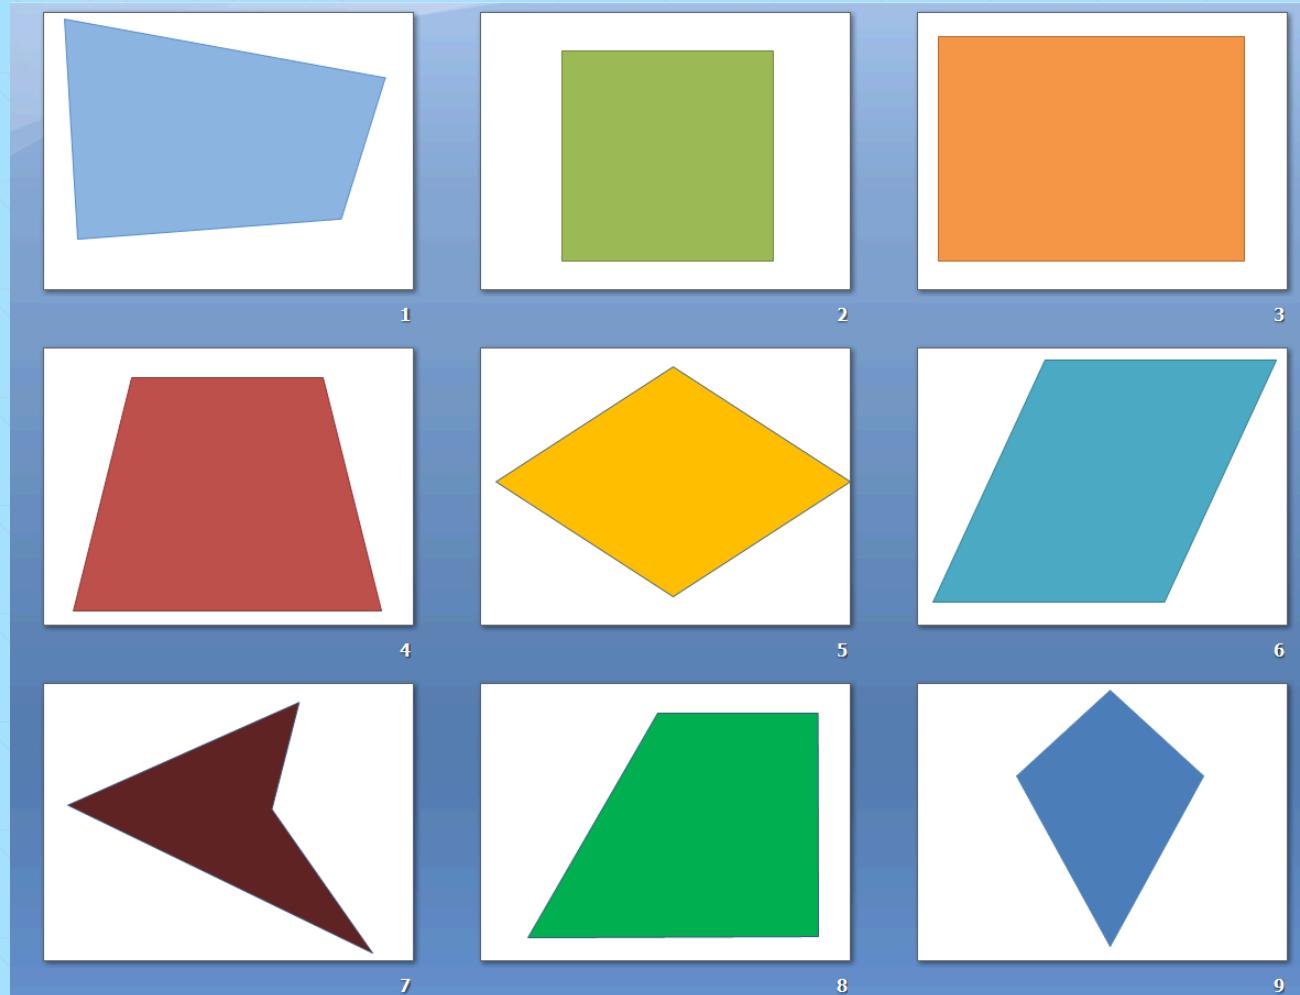

Geometry!

What will we learn?

- Apply the angle sum of a triangle and quadrilaterals
- Distinguish between convex and non-convex quadrilaterals
- Describe squares, rectangles, rhombuses, parallelograms, kites and trapeziums

Angle Sum of Quadrilaterals

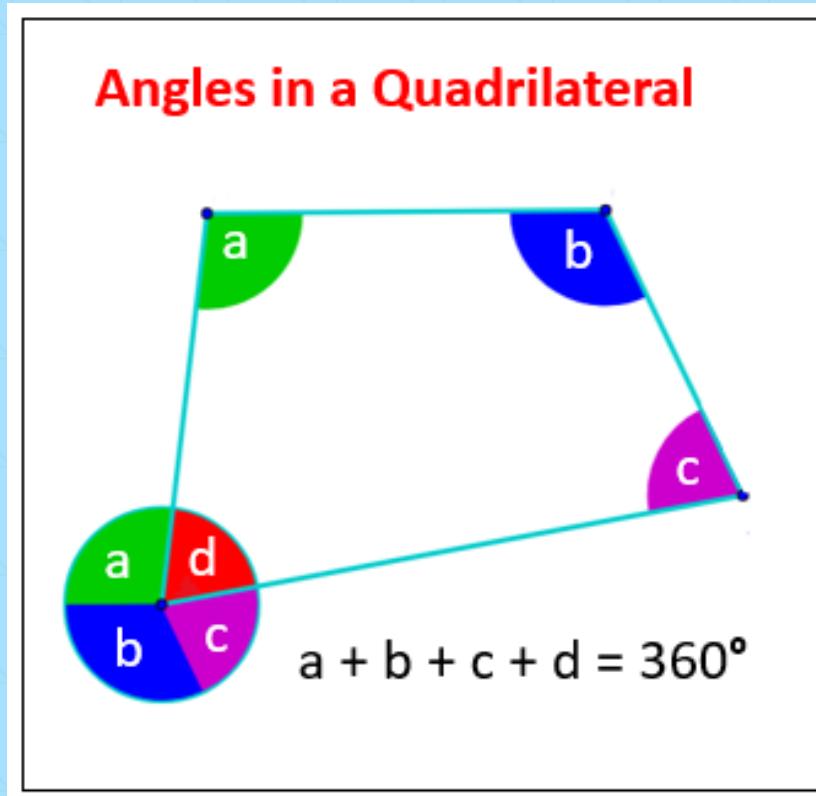

Activity

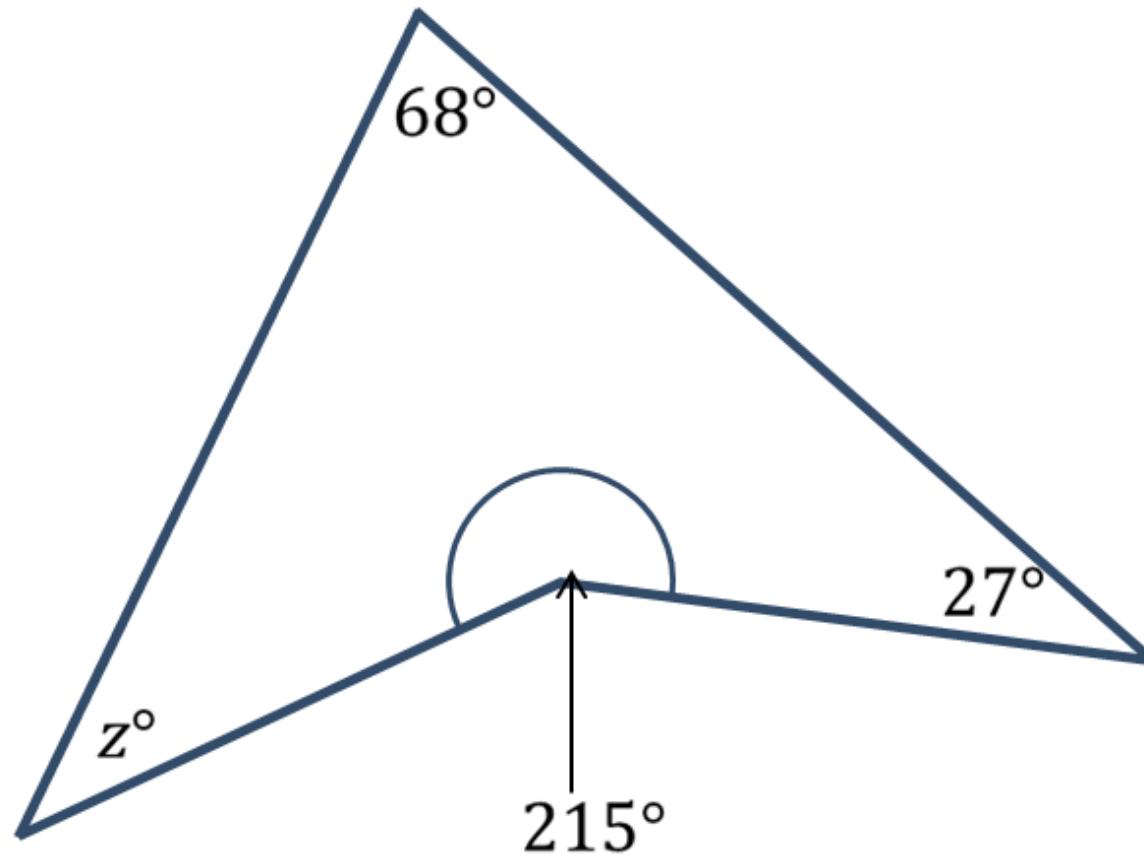

- You all have a quadrilateral
- Label the angles 1, 2, 3 and 4
- Cut them out like you did before
- Now put the corners together
- What do you get? 

The Angle Sum of a Quadrilateral

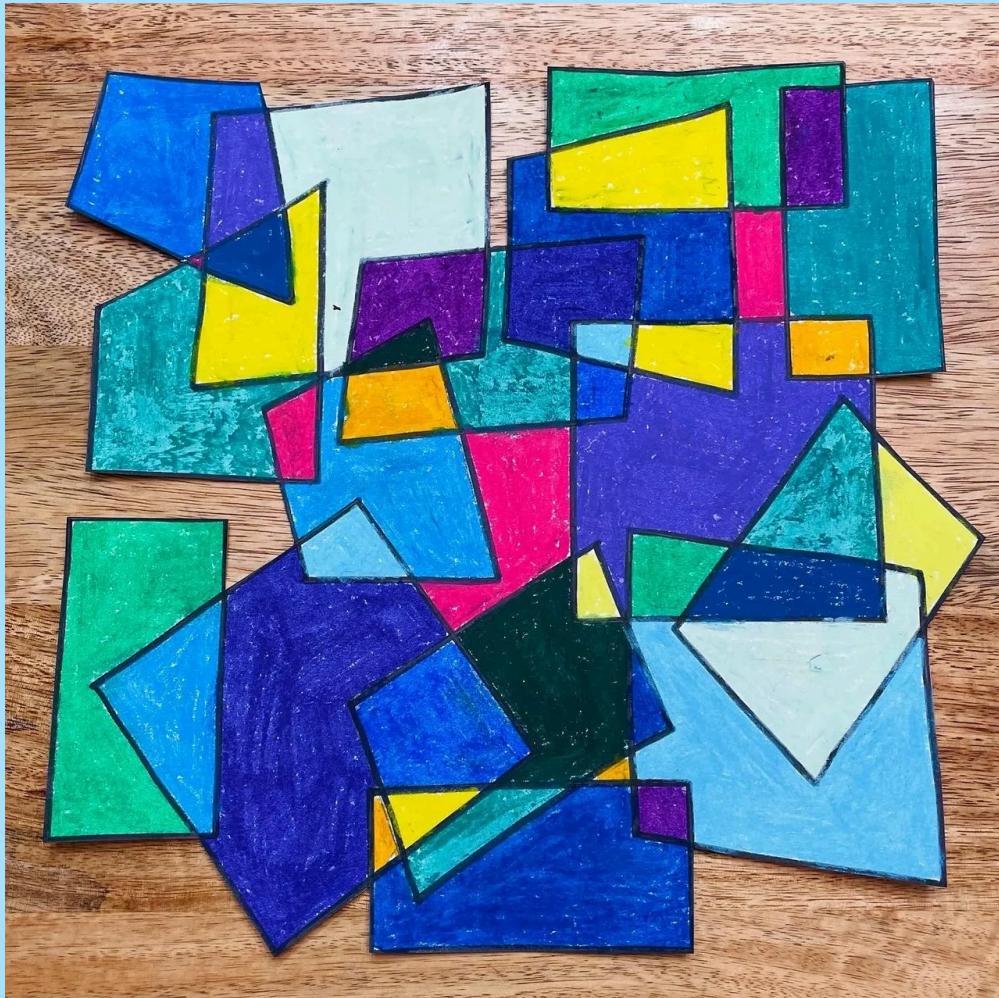

- is 360° !

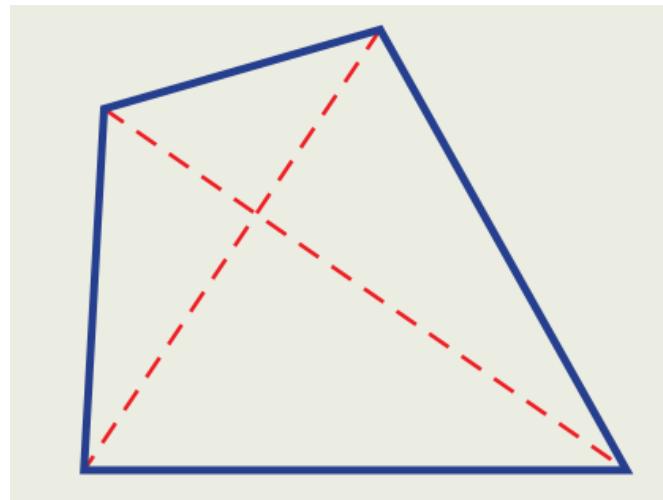

Example

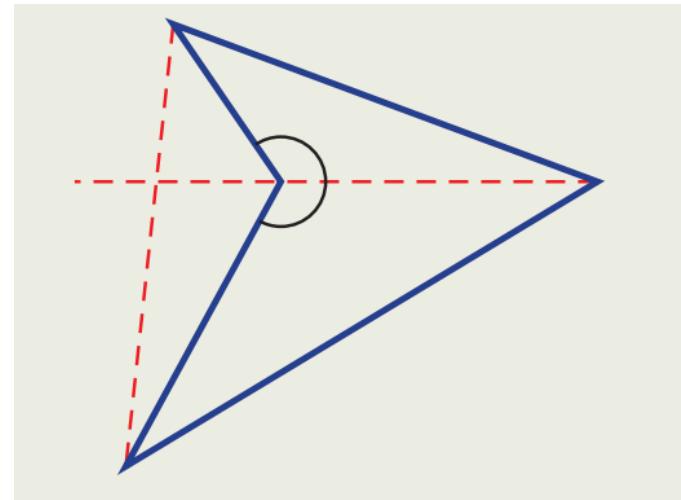

Classifying Quadrilaterals

Convex

Non-Convex

All vertices point outwards

Both diagonals inside

All interior angles less than 180°

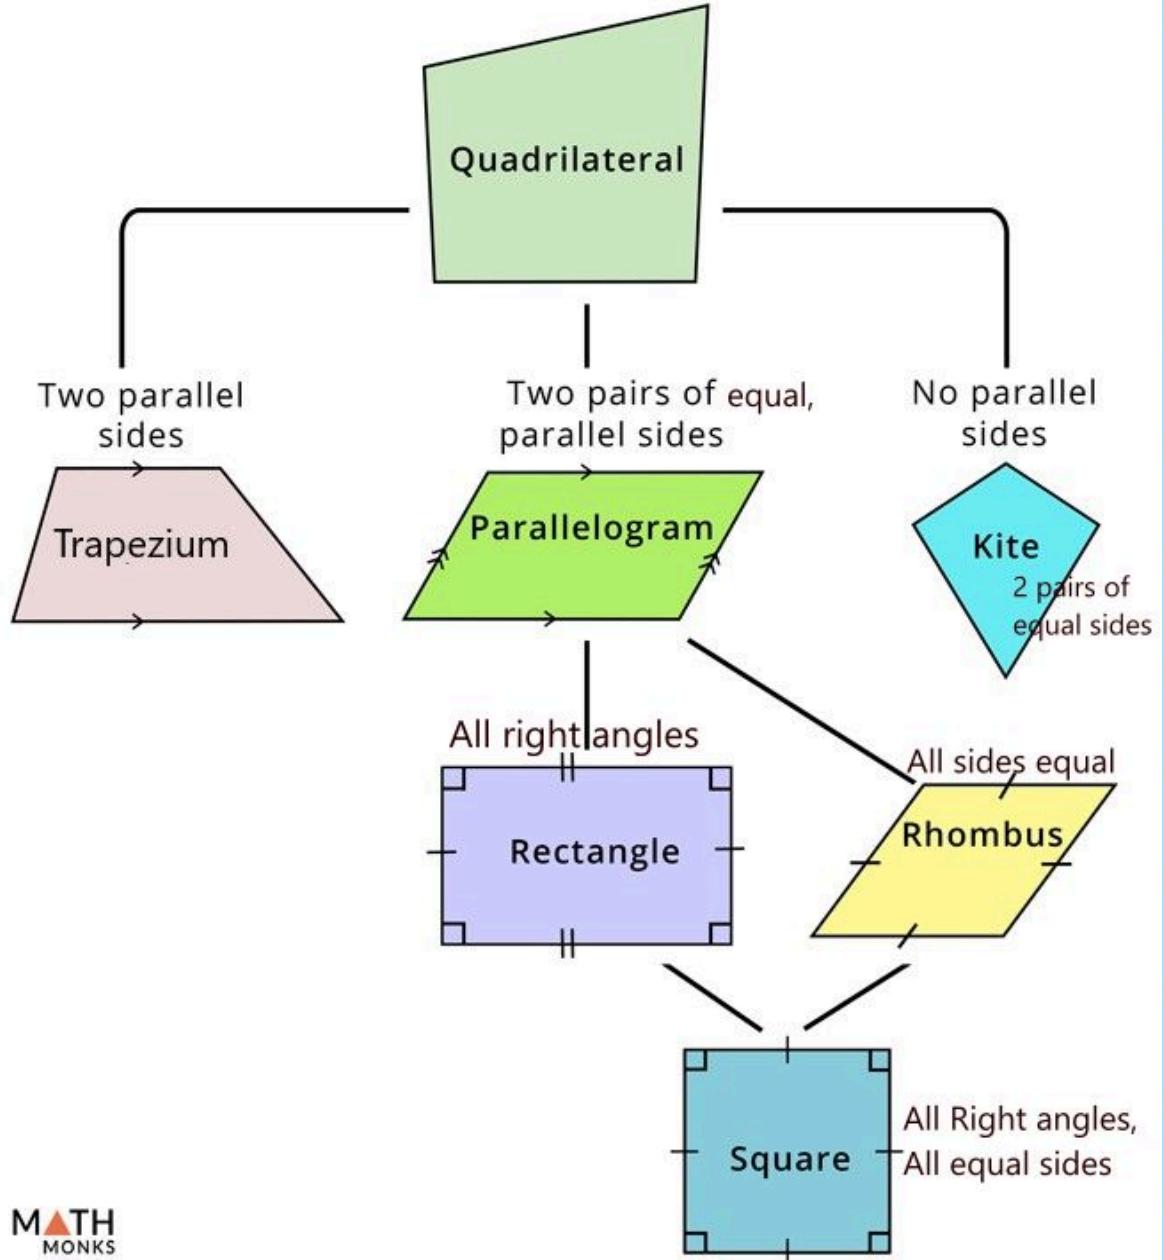

One vertex points inwards

One diagonal outside

One interior angle more than 180°

Visual

Quadrilateral Family Tree

right angles? Equal sides? Parallel sides?

Trapezium

Kite

Parallelogram

Rectangle

Rhombus

Square

	right angles?	Equal sides?	Parallel sides?
Trapezium	✗	✗	1 pair
Kite	✗	2 pairs	✗
Parallelogram	✗	2 pairs	2 pairs
Rectangle	✓	2 pairs	2 pairs
Rhombus	✗	All 4	2 pairs
Square	✓	All 4	2 pairs

What will we learn?

Polygons

- Classify triangles according to their side and angle properties
- Apply the angle sum of a triangle and quadrilateral
-

Key words

Write these down with a lot of space in between, we will define each one over the next few lessons

- Perpendicular

- Angle Sum
- Exterior angle of a triangle
- Scalene Triangle
- Supplementary Angles
- Convex quadrilateral
- Kite
- Parallelogram
- Trapezium
- Diagonal
